RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 40 pages. Original publisher: Seattle, Wash. : U. S. Dept. of Commerce, National Oceanic and Atmospheric Administration, National Marine Fisheries Service, Alaska Fisheries Science Center, 1997 OCLC Number: (OCoLC)501171780 Subject: Neuston -- North Pacific Ocean -- Geographical distribution -- Observations. Excerpt: . . . Arthropods were the most abundant neuston group collected; 77 (57) of the total 134 taxa collected were crustaceans. Amphipods and copepods were the most diverse groups, represented by 52 (39) taxa. The two most abundant species, *Themisto pacifica* and *Calanus pacificus*, were also the most widely distributed and frequently collected species, occurring in 64. 3 and 69. 1 of the samples, respectively, and in all temperature intervals (Table 2). Their frequency of occurrence declined from north to south. Crustacean diversity was greatest (46 taxa) within the warmest interval. Thirty-four and 45 crustacean taxa were collected in the southern and northern regions of the NPSFZ, respectively, and 57 in the combined intervals. Eighteen crustacean taxa were collected in the SD (Table 2): Molluscs were second to arthropods in frequency of occurrence. Pteropods were the most diverse group and squid larvae the most frequent group of molluscs encountered. Twelve taxa of pteropods were collected, two or more taxa in each temperature interval. Pteropod species richness did not follow the general trend of simple community structure in temperate latitudes and more complex community structure in subtropical latitudes. Pteropod species richness was greatest in the 12. l -15. 0 C interval, where all genera were represented and all but three species were collected (Table 2). Five of the pteropod species were. included in Fager and McGowans (1963) analysis of zooplankton co-occurrence in the North...
